

## Intel® Software Partner Program ISV Technology Snapshot

Acumen Software Technologies Ltd. in India

**Open Sesame\* 3.0 – Supply Chain Management (SCM)**

### Product Overview

Open Sesame\* 3.0 is a Supply Chain Management (SCM ) product which integrates various departments of the distribution chain of a manufacturing and distribution company (such as Manufacturing Plants, Transshipment Warehouses, Sales Offices), and more critically, customer chains (such as distributors, wholesalers, industrial buyers, shipping agents) that are geographically distributed over a single country or various locations in the world. This product platform addresses the manufacturing, retail and third party logistics supply chain management solution segment.

By enabling our Open Sesame\* technology for Intel® multi-core technology we were able to increase transaction speeds. Our customers spend less time using our application for transactions like purchase orders, order processing, dispatching etc, and instead deliver increased productivity for their organization. OPENS SESAME™ has been deployed on Hewlett-Packard's Proliant range of servers at HP laboratories, Bangalore and have demonstrated split-second transactions speeds.

### Multi-core/Parallelism

#### Compatibility

Linux\*

#### Availability

India

*"We developed our Open Sesame™ product for Intel® multi-core technology because our customers have compute-intensive requirements and load of concurrent users on the system is very high Intel® multi-core technology handles this load efficiently and transactions speeds of split second have been achieved as evidenced by the test reports*
